INSTALLATION GUIDELINES FOR THE RS SOCKET

The RS168 Socket should be set into concrete generally in accordance with International Standards or good Codes of Practice for the installation of posts.

1. Prepare hole at least 75mm deeper than the overall height of the RS socket.
2. Compact at least 75mm of MOT type 1 granular material in base of hole.
3. Position RS Socket in centre of hole. Connect ducting from remote chamber to a cable entry port at the base of the socket. Leave draw cord in base of Socket.
4. Remove locking lid and pedestrian plate.
5. Install a levelling post (stump pole) in the RS Socket, fasten the locking set-screws and replace the locking chamber lid.
6. Surround with the required amount of concrete (ST4 mix or stronger) See foundation sizes below. Use stump pole to achieve a vertical level.
7. Once vertical level is achieved, compact concrete.
8. Once concrete has been compacted and has begun to cure, carefully remove stump pole and lock the pedestrian plug in place.
9. Replace the locking chamber lid and secure in position. Finish footway with required surface when concrete has cured.

For more detailed foundation sizing on specific site conditions contact your supplier.
